JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
- for containerless growth 594

Computer simulation
- of continuum transport 87
- of dendritic growth 269
- of stability analysis 261
- of vertical zone melting 286

Constitutional supercooling
- of cadmium telluride 371
- of monotectic alloys 582

Convection 286, 500, 516, 582

Dendritic growth
- of gadolinium calcium oxoborate 168

Device characterization
- diodes 103, 355
- electronic materials 412
- lasers 412
- nonlinear optics 149
- quantum wells 362

Diffusional control
- of gallium nitride 473
- of polymer crystallization 244

Diodes, see Device characterization

Electronic materials, see Device characterization

Epitaxy, see Thin film growth

Etching
- chemical 12, 179, 317
- photolithographic 317
- thermal 12

Eutectic growth, of
- gold 103

Heat flow control, of
- vertical zone melting 286

Hydrodynamics, see Convection

Kinetics
- of dissolution 234
- of growth 40, 61, 67, 125, 186, 197, 227, 244, 317, 599
- of interface control 355
- of nucleation 412, 599

Lasers, see Device characterization

Lasers, crystals for
- barium lithium fluoride 156
- yttrium aluminum garnet 163

Lysozyme 599

Melt growth technique
- by Bridgman–Stockbarger method
  - of cadmium zinc telluride 87
  - of gallium indium antimonide 333
  - of lithium yttrium fluoride 405
- by chill cast
  - of titanium iron silicide quasicrystals 131
- by Czochralski method
  - of germanium 75
  - of lithium niobate 179
  - of silicon 67
  - of yttrium aluminum garnet 163
- by floating zone method
  - of barium lithium fluoride 156
  - of silicon 500
- by pulling down method
  - of rutile 450
- by uniaxial solidification
  - of cadmium magnesium selenide 51
- theory of
  - silicon grown in defects 387
  - stability 261
  - two-dimensional nucleation 168

Microgravity, growth under
- of magnetic levitation 594
- of silicon 500
- of sodium chloride 227

Morphological stability
- of alpha-alumina 213
- of cadmium sulphide 486
- of cadmium telluride 371
- of clusters 434
- of oxide crystals 186
- of polyethylene terephthalate 244

0022-0248/99/$-see front matter © 1999 Elsevier Science B.V. All rights reserved.
PII: S0022-0248(99)00228-6

Nucleation
- of cadmium sulphide 486
- of electrodeposits 255
- of potassium chloride 434
- of potassium dihydrogen phosphide 564
Numbers
- Grashof 87
- Marangoni 261, 582
- Peclet 87, 582
- Taylor 87, 286

Phase diagrams, of
- bismuth borate 149
- growth modes 376

Quantum wells, see Device characterization

Solid growth technique
- by recrystallization
- - of zinc selenide 309
Solution growth
- by electrodeposition
- - of cadmium 255
- - of copper 255
- - of nickel 255
- by extractive crystallization
- - of silver bromide 554
- - of silver chloride 554
- by flux
- - of bismuth borate 149
- - of molybdenum trioxide 547
- - of neodymium barium cuprate 534
- by hanging drop
- - of lysozyme 599
- by hydrothermal method
- - of alpha-alumina 213
- by inverted micelles
- - of cadmium sulphide 486
- by low temperature method
- - of hydrated neodymium carbonate 454
- - of potassium dihydrogen phosphate 197, 425
- by metathetical reaction
- - of palladium cobalt cuprate 400
- theory
- - of growth habit 186
Stefan problem or moving boundary problem 87, 227
Surface energy determination
- of triclinic calcium pyrophosphate dihydrate 234
Surface structure, of
- aluminum gallium nitride 40
- cadmium telluride 61, 371
- gallium nitride 349
- ionic clusters 434
- s–k growth modes 376
- silicon germanium carbon 80
- zinc selenide 45

Thin film growth, epitaxy
- by chemical bath deposition
- - of copper selenide 113
- by liquid phase epitaxy
- - of aluminum gallium arsenide 327
- - of indium phosphide 25, 459
- - of lithium niobate 173
- by metalorganic molecular beam epitaxy
- - of indium gallium phosphide 317
- by molecular beam epitaxy
- - of aluminum arsenide antimonide 447
- - of antimony telluride 125
- - of bismuth telluride 125
- - of cadmium telluride 61
- - of gallium antimonide 297
- - of gallium nitride 349
- - of indium gallium arsenide 18
- - of indium gallium phosphide 31
- - of indium gallium thallium arsenide 302
- - of indium thallium phosphide 302
- - of silicon germanium carbon 80
- - of zinc magnesium selenide 355
- - of zinc selenide 45
- by reactive deposition epitaxy
- - of calcium disilicide 570
- - of siloxene 570
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of cadmium selenide 362
- - - of gallium nitride 1, 473
- - - of titanium silicide 540
- - - of zinc selenide 362
- - through metalorganic chemical vapor deposition
- - - of aluminum gallium nitride 40, 443
- - - of aluminum indium arsenide antimonide 481
- - - of gallium arsenide 464, 516
- - - of gallium nitride 12
- - - of indium gallium nitride 340
- theory of
- - growth modes 376
- - strain induced miscibility 511

Vapor growth technique
- by chemical transport
- - of zinc gallium oxide 141
- by evaporation and condensation
- - of cadmium telluride 371
- - of organic salt 412
- by reactive atmosphere process
- - of metal fluorides 421
- theory
- - of dendritic growth 269
Vapor–liquid–solid growth
- of indium tin oxide 136

Whiskers growth
- of indium tin oxide 136
- of neodymium barium cuprate 534
